

NordSecure Consulting GmbH

Prepared by: Veaceslav Eremia

Role: Junior Cybersecurity / GRC Analyst

Assessment Type: Portfolio Case Study

Date: September 2026

This assessment evaluates the cybersecurity risks of NordSecure Consulting GmbH, a fictional small business with 25 employees operating in the business consulting sector.

The assessment identified several significant risks, including phishing, credential theft, ransomware, unauthorized access and cloud misconfiguration.

The highest-priority recommendations include enforcing Multi-Factor Authentication, strengthening endpoint protection, improving access management, protecting backups and increasing employee security awareness.

Risk	Level	Priority
Phishing	Critical	1
Credential Theft	Critical	2
Unauthorized Access	High	3
Ransomware	High	4
Cloud Misconfiguration	High	5

Seite 3 - Recommended Controls
